

### Drive System

#### Motor & Drive

For the main drive the Corr24 portfolio holds several solutions.

Obsolete components may have to be replaced or system with a higher power can be installed to raise the speed.

This can be a simple change of the drive unit only or of the full motor-drive assembly.

For this we do offer DC- as well as AC-technology in the desired power range.

If required or wanted, Corr24 can also offer a new electrical cabinet.

---

#### Gear System

Depending on the application Corr24 does use either an integrated high-performance gearbox or a flexible dual-gearbox-system with two separate gearboxes.

---

#### Belt Drum Unit

In case there is a technical or process requirement to replace the belt drum unit, Corr24 can provide a high-speed version incl. the belt drums.

---

#### Benefits

- Higher speeds
- Improved spare parts supply
- Less machine downtime
- Reliable service
- Less maintenance
